2	AR Dept of Energy DEQ	Pulaski	EVAL and Status of PFAS in surface water	Create a lab (including equipment purchases) to support the evaluation of the status of PFAS in Arkansas's surface waters, including drinking water sources and fish tissue; discharges to Arkansas's surface waters; municipal and industrial sludges; and land application site soils. Analysis of samples will focus heavily on small, disadvantaged communities across the state. This study will further provide information to inform the identification and selection of the appropriate treatment technology or alternatives including, but not limited to, best management practices to prevent PFAS from entering waters of the state. Monitoring in this capacity is integral in the identification of the best solutions for addressing PFAS in the state and characterizing the discharges, points of disposal, and fate of PFAS in Arkansas's surface waters and drinking waters sources.
